PHP register_globals **Off**
 08:49 am (<http://thetinker.net/admin.php?ctrl=time>)
PHP allow_url_include **Off**
b2evolution (<http://thetinker.net/>) ▼ [Front-office \(http://thetinker.net/\)](http://thetinker.net/) [Back-office \(http://thetinker.net/admin.php\)](http://thetinker.net/admin.php) [+](#) Post
PHP Magic Quotes **Off**
[Collection \(http://thetinker.net/\)](http://thetinker.net/) [More \(http://thetinker.net/admin.php#\)](http://thetinker.net/admin.php#) ▼

PHP upload_max_filesize **2M**

PHP post_max_size **8M**

PHP memory_limit **256M**

The memory_limit is low. Some features like image manipulation of large files may fail to work.

PHP forced_max_execution_time **600 seconds**

b2evolution was able to request more time (than the default 300 seconds) to execute complex tasks.

PHP mbstring extension **Loaded**

PHP XML extension **Loaded**

PHP IMAP extension **Loaded**

PHP opcode cache **none**

Using an opcode cache allows all your PHP scripts to run faster by caching a "compiled" (opcode) version of the scripts instead of recompiling everything at every page load. Several opcode caches are available. We recommend APC.

GD Library (image handling)

GD Library version **bundled (2.1.0 compatible)**

GD JPG Support **Read/Write**

GD PNG Support **Read/Write**
